

REFERENCE CONFIGURATION

Articulating-Boom Aerial Work Platform Truck

An articulating boom can reach around obstacles. Before choosing the chassis, check the reach path at the required basket load, the space for stabilizers and access along the route.

DOCUMENT ID	KRS-RC-001
REVISION / ISSUE DATE	1.1 / 2026-09-07
CLASSIFICATION	Reference Configuration - no verified commercial model asserted
EVIDENCE CLAIM	KRS-CLAIM-PRODUCT-AERIAL-ARTICULATING

Product data and configuration

Product specifications published by KEEYAK. Final values are confirmed for the selected chassis, configuration and destination.

Final dimensions, installed equipment, route suitability and acceptance records are confirmed for the selected project.

Technical specifications

Working Height

12-24 m

Status: source-stated-range. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Bucket Capacity

200 kg

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Boom Type

Articulating Boom

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Rotation Angle

360°

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Outrigger extension and retraction time

<=60 s

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Operation Type

Manual / Wireless Remote

Status: source-stated-range. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Acceptance record requirements

- 1. Reconcile platform geometry, basket load, outriggers, controls, interlocks and emergency lowering to the approved configuration.
- 2. Witness the agreed functional and stability-related checks using the selected model documentation and test method.
- 3. Record completed-vehicle mass, axle loads, load charts, manuals, inspection records and exceptions.
