

REFERENCE CONFIGURATION

Insulated Aerial Work Platform Truck

Electrical clearance and insulation class guide the choice of an insulated aerial platform. Agree the test method, then check basket load, working envelope and site access against destination rules.

DOCUMENT ID	KRS-RC-002
REVISION / ISSUE DATE	1.1 / 2026-09-07
CLASSIFICATION	Reference Configuration - no verified commercial model asserted
EVIDENCE CLAIM	KRS-CLAIM-PRODUCT-AERIAL-INSULATED

Product data and configuration

Product specifications published by KEEYAK. Final values are confirmed for the selected chassis, configuration and destination.

Final dimensions, installed equipment, route suitability and acceptance records are confirmed for the selected project.

Technical specifications

Insulation Level

12 / 35 /46 kV

Status: source-stated-range. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Working Height

12-32 m

Status: source-stated-range. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Bucket Capacity

200 kg

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Rotation Angle

360°

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Outrigger extension and retraction time

<=60 s

Status: source-stated. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Operation Type

Manual / Wireless Remote

Status: source-stated-range. Verification: Confirm against the selected platform load chart, stability basis, interlock test and completed-vehicle records.

Acceptance record requirements

- 1. Reconcile platform geometry, basket load, outriggers, controls, interlocks and emergency lowering to the approved configuration.
- 2. Witness the agreed functional and stability-related checks using the selected model documentation and test method.
- 3. Record completed-vehicle mass, axle loads, load charts, manuals, inspection records and exceptions.
